Description

In this Open Activity we will talk about the classic foods of the Mediterranean Diet (olive oil, nuts, fruits, vegetables and fish), addressing their composition, as well as their beneficial potential for health. In addition, the metabolic and physiological mechanisms that contribute to explain the health effects of the Mediterranean pattern will be discussed. A comparison of the Mediterranean Diet with other global dietary patterns will be made.

Objectifs

The objectives of the activity can be specified first of all by informing about the foods of the Mediterranean Diet and their metabolic benefits.

Promote the comparison of the Mediterranean Diet with other dietary patterns.

Promote Networking and international collaboration tasks in the field of nutrition.

En collaboration avec

Programme

10 07 2024
